

said actuator means having a manually operated element being accessible from the outside of said receptor body,

a pair of locking elements mounted in said receptor body in operative relationship to said actuator means at a position between the spaced prongs for selectively engaging the punched holes of the male plug locking the prongs of the male plug to said receptor body,

said actuator means being movable along an axis parallel to the spaced prong to a first position between the spaced prongs for permitting insertion and removal of the prongs relative to said locking elements, and

said actuator means being movable along said axis parallel to the spaced prongs to a second position between the spaced prongs in said receptor for [simultaneously] rigidly urging said pair of locking elements outward in opposite directions into locking contact with the prongs of the male plug[.], said manual element having a greater width at said second position than at said first position.

Claim 7, line 3 delete "actuators" and insert --actuator--.

Remarks

By this amendment Claim 1 has been amended to better define the invention of the application. Claim 7 has been amended to overcome the rejection under indefiniteness. It is noted that Claims 2 to 7 were indicated as containing allowable subject
